

InMaps Automated Driving Survey

Reporting and data capture for leakage surveys in record time.

The InMaps Automated Driving Survey (ADS) solution results in an average time savings of 25% in reporting and data capture for leakage surveys. It also provides auditable data for natural gas utilities to use in demonstrating leakage survey compliance. ADS accomplishes this by entirely automating the record keeping related to gas detection surveys of buried gas facilities.

GPS is used to track the progress of the surveys and create inspection reports within Smallworld versions 3.3 and 4.0. ADS for ESRI and Tensing Mobile GIS applications are currently under development.

ADS is coupled with the InMaps Mobile Server and GPS Locator® products to provide a mobile Smallworld GIS solution. Mobile Server automates the maintenance of Smallworld datastores and Smallworld images on remote machines. For the end user, synchronization of the remote machines is accomplished by clicking an icon on the desktop.

For more information, please email info@inmaps.com or call (603) 968-3670.

What ADS can do for you:

- Automatically create inspection records for each street surveyed using GPS data
- Provide detailed reporting for operations management and for regulators
- Be integrated with leak information to show leak status along with survey information
- Work directly inside Smallworld, yet be integrated into other systems
- Automatically track all work by operator, vehicle, detector, and GPS unit
- Offer feedback in the field about what has and has not been surveyed
- Provide auditable information to prove compliance
- Easily be used in the driving survey vehicle

About InMaps

InMaps provides geospatial consulting services for natural gas and electric utilities, with special emphasis in Smallworld systems. Consulting services include application development, technology upgrades, PowerOn® support, system integration, compliance reporting, training, and on-site services. Products include GPS Locator and Dimension Toolkit. Field solutions include Automated Driving Survey, for the natural gas industry, and Mobile GIS, which gets Smallworld into the field. InMaps is a GE Energy Value Added Reseller.
