

Dimension Toolkit

Get more accurate data and use resources more efficiently.

Dimension Toolkit makes the task of inserting and modifying dimensions and dimension annotation faster and more efficient than Smallworld's core editor. Do you place dimension objects in Smallworld? A lot? Do your dimension objects have physical fields? The Dimension Toolkit accommodates that too. Fewer clicks, fewer key strokes...more accuracy, more consistency.

Dimension Toolkit makes it possible for measurements to be inputted in only three clicks! The result is more accurate data and more time to focus on other important tasks.

Additionally, Dimension Toolkit provides the ability to quickly insert and transform commonly-used reference objects, such as catch basins and utility poles. The product is completely customizable and extensible, which means it will meet your specific business needs.

What Dimension Toolkit can do for you:

- *Insert, modify, and delete dimensions on-the-fly*
- *Place and update swing-tie dimensions*
- *Automated trail constructions*
- *Shorthand data entry*
- *Automatically place and modify dimension annotation with one click*
- *Automatically annotate dimensions that are not to scale with 'NTS'*
- *Create customized tabs for inserting and transforming objects*
- *Calculated dimensions are created by distances entered by the user or by the length of the trail*
- *One-click placement of leader lines with annotation*
- *Accommodates all units of measurement, including decimal feet and feet with inches*
