

Smallworld Services

Smallworld is our world.

InMaps has focused on Smallworld technology for over ten years. We are acknowledged experts in deploying, customizing, and managing Smallworld systems. We offer a variety of services to integrate and improve Smallworld system functionality and reliability.

In addition to our general Smallworld services, we can provide in-depth technical information, demonstrations, and quotes on GE Energy's Smallworld software offerings, including Gas Distribution Office and PowerOn™.

Upgrading Smallworld

Are you running the latest version of Smallworld? Did you know that upgrades are getting easier? While the jump to SWAF can require some rethinking, your current Smallworld applications can be wrapped as-is, if you want. And there's nothing like being on the current version to be able to take advantage of all that Smallworld has to offer. From office suites, the new Smallworld Internet Application Server, and support for the latest Windows and Oracle offerings, an upgrade can have many benefits.

Gas Distribution Office (GDO) Installation Assistance and Support

GE Energy recently introduced its first Office Suite, GDO. Now utilities can get out of the custom application business. GDO allows companies to install, configure, and start using applications faster than ever before. In addition, when it comes time to upgrade, all the applications are upgraded together, by GE.

PowerOn™ Installation, Configuration, Enhancement, and Tuning

PowerOn took the Outage Management business by storm in 2000. Many benefits were realized by tying the OMS puzzle into GIS. Circuits were kept up-to-date by GIS personnel, dispatchers knew where things were happening, and outages could be managed by circuit instead of town. The revolution continues and today there's a vibrant community of companies running PowerOn. We've been there since Day One and we've continued to provide support to this unique product. Need to install PowerOn? Want to tune your existing installation? Did somebody just call and ask you to make PowerOn do more? We've been there. We know PowerOn inside and out.

For more information, please email info@inmaps.com or call (603) 968-3670.

Our Smallworld services include:

- *CIS/GIS integration*
- *PowerOn™ support*
- *Application development*
- *GIS technology upgrades*
- *On-site & remote GIS updates*
- *OMS & Priority Technical Support (PTS)*
- *Training of technical and operations staff*
- *Compliance applications & reports*
- *Design Manager installation, configuration, and support*
- *Design Layout Tools configuration*
- *Installing, configuring, and/or extending Smallworld*
- *Spatial analysis using GIS*
- *Internet Application Server implementation, customization, and support*

About InMaps

InMaps provides geospatial consulting services for natural gas and electric utilities, with special emphasis in Smallworld systems. Consulting services include application development, technology upgrades, PowerOn® support, system integration, compliance reporting, training, and on-site services. Products include GPS Locator and Dimension Toolkit. Field solutions include Automated Driving Survey, for the natural gas industry, and Mobile GIS, which gets Smallworld into the field. InMaps is a GE Energy Value Added Reseller.
